FAQs	55	DISCUSSION	83
SPECIAL COMMENTS	56	Tending to an infinite	
Gravity and Capillary Forces in		number of cells.	83
Darcy's Equation	56	Vertical gridding and SPC	86
The Fractional Flow Curve and		SPECIFIC PRODUCTIVITY	90
Capillary Forces	57	VISCOUS-DOMINATED	
Average and Point Saturations	57	DISPLACEMENT IN	
Continuous and Discontinuous		HOMOGENEOUS LINEAR	
Values	57	SYSTEMS	90
Volumetric Properties	58	VISCOUS-DOMINATED	
SUMMARY AND		DISPLACEMENTS IN TWO-	
CONCLUSIONS	58	DIMENSIONAL	
REFERENCES	58	HOMOGENEOUS SYSTEM	91
HETEROGENEITIES AND		TWO-DIMENSIONAL	
AVERAGES	59	HOMOGENEOUS GRAVITY-	
FLUIDS FLOW IN		DOMINATED SYSTEM.	93
HETEROGENEOUS SYSTEMS	59	GENERAL SOLUTION	94
Case I. Unsteady-State Flow	61	FAQs	94
Water Saturation (Sw)	62	SUMMARY AND	
Relative Permeabilities	62	CONCLUSIONS	95
Summary	64	REFERENCES	95
Remarks	64	EPILOGUE	96
Case II. Steady-State Flow	64	A BIT OF HISTORY	96
Summary	66	THE WAY TO GO	98
Comments	67	FINAL WORDS	99
ANALYSIS OF RESULTS	67	SUPPLEMENTARY TOPICS	100
Mathematical Average	67	RESIDUAL OIL SATURATION	100
Physical Average	67	Wettability	100
A Conceptual Answer	68	The Displacement mechanism	101
FAQs AND COMMENTS	68	Initial Water Saturation	101
SUMMARY AND		Extrapolations	102
CONCLUSIONS	69	IRREDUCIBLE WATER	
REFERENCES	69	SATURATION	102
NUMERICAL SIMULATION	70	Scarcely laminated Average	
FIRST EXAMPLE – CELL SIZE	70	Permeability Samples (between 20	
Displacement diagram	70	and 200 mD).	102
Fractional Production Curves	72	High Permeability Samples (more	
Analysis and First Conclusions	74	than 500 mD), or Average	
Observation	75	Permeability, very Laminated	
FAQs	77	Samples.	102
SECOND EXAMPLE – CELL		Scarcely Permeable Samples (less	
LOCATION	77	than 20 mD).	103
Additional Analysis and		Conclusions	103
Conclusions	80	Scarcely laminated average	
Observations:	80	permeability samples (between 20	
FAQs	80	and 200 mD).	103
SUMMARY AND		High permeability samples (more	
CONCLUSIONS	82	than 500 mD) or average	
REFERENCES	82	permeability and very laminated	
SUPPLEMENTARY		samples.	103

Scarcely permeable samples (less than 20 mD).	103	Lab Measurements	106
CORRELATIONS	103	Consequences	107
VISCOSITY RATIO	104	Edge Effects.	107
THREE-PHASE RELATIVE PERMEABILITIES	104	Relative Permeabilities.	107
IMPLICIT CALCULATION METHOD	105	How to Introduce Wettability in Reservoir Models?	107
WETTABILITY	106	REFERENCES	108
The Essential Concepts	106	CONTENTS	109
